HP Education Services for Linux

Service brief

Linux: the operating environment of choice

Unless you've been incommunicado for the last few years, you've probably noticed the extensive press that Linux has recently received. With its flexibility, stability, and high reliability, Linux has emerged as an operating environment of choice in strategic markets. However, the success of such a pervasive environment can be fully tapped only with the right technical expertise. HP Education Services offer customers a range of global training courses designed to equip them with the knowledge to configure, manage, and troubleshoot their Linux environments better.

Linux training from HP

Whether you are new to Linux or a seasoned veteran, HP offers the training you need to install, implement, and maintain your Linux system. If you are new to Linux, our fundamentals, such as Linux System Administration I and II courses, will give you a firm foundation. If you are an experienced UNIX® or Solaris administrator, jump-start your Linux career by attending our course on accelerated Linux system administration. Our advanced Linux administration curriculum builds on the skills developed in our core classes and continues with advanced courses such as security (both host and network), device driver writing, and troubleshooting.

Our courses are designed to be distribution neutral, covering both Red Hat and SuSE versions. Alternatively, you may choose to buy Red Hat classes from HP. Completion of either of these versions, together with practical experience, helps you prepare for the appropriate certification of your choice.

Features and benefits

Flexible training options: With HP, you have a choice of course delivery options. You could avail our distribution-neutral courses, covering both Red Hat and SuSE versions, or choose to buy Red Hat classes from us. You also have an option to choose from a variety of course delivery formats—an instructor-led training with hands-on labs either in the classroom or remotely, or self-paced training.

Mitigate downtime and risks: High quality training from HP helps equip users with the right theoretical and practical knowledge about Linux environments. This mitigates risks arising due to poor maintenance or human errors.

Reduce costs: By mitigating operational risks and downtime, our Linux training portfolio helps you reduce operational costs.

Increase ROI from Linux investments: Our comprehensive Linux training module helps you build a well-trained workforce capable of handling your Linux systems effectively. These skills translate into reduced operational risks and downtime, thereby reducing operational costs and increasing your ROI from Linux investments.

HP differentiators

- Open source and Linux solutions for enterprises of all size—large, medium, and small; this market leadership and experience adds value to our Linux training module
- Choice of HP Linux distribution-neutral courses or Red Hat-specific courses
